NAME: **PRAVEEN BALAJI P**

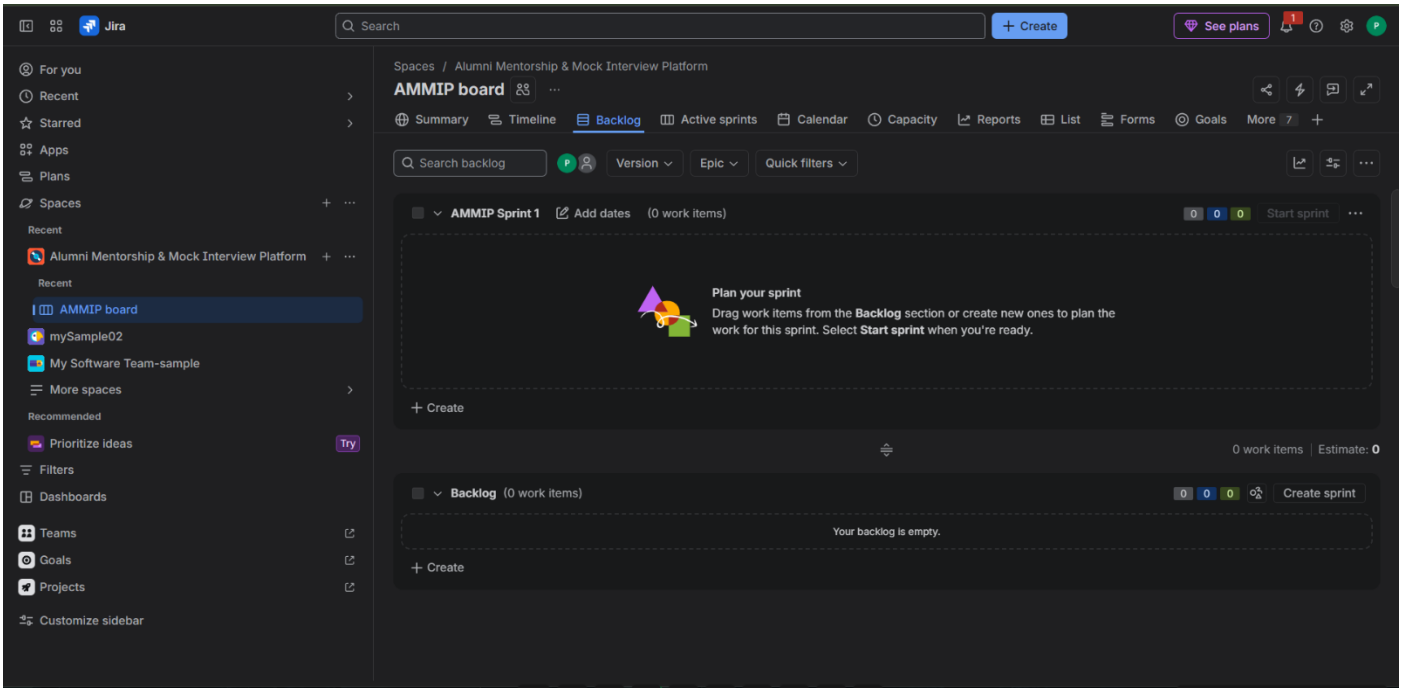

SECTION: **G**

SRN: **PES2UG24CS374**

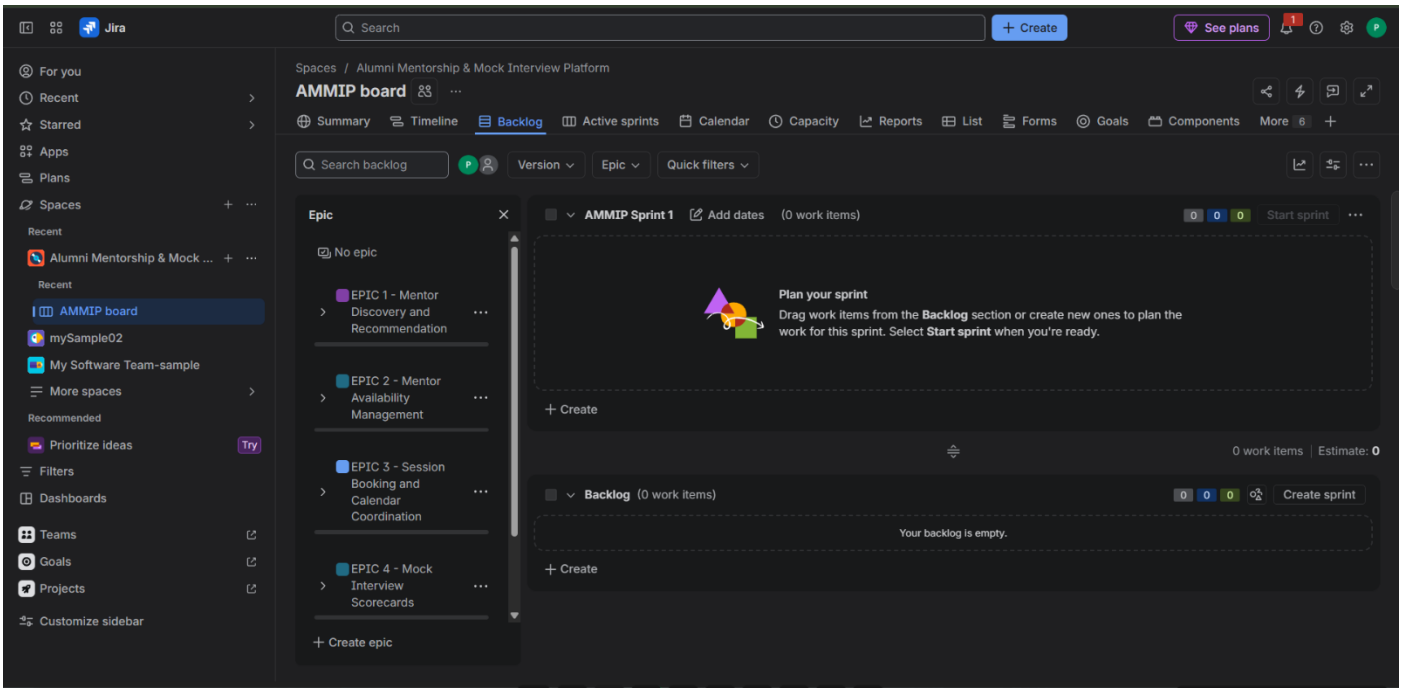

Topic: Alumni Mentorship & Mock Interview Platform

SCREENSHOTS

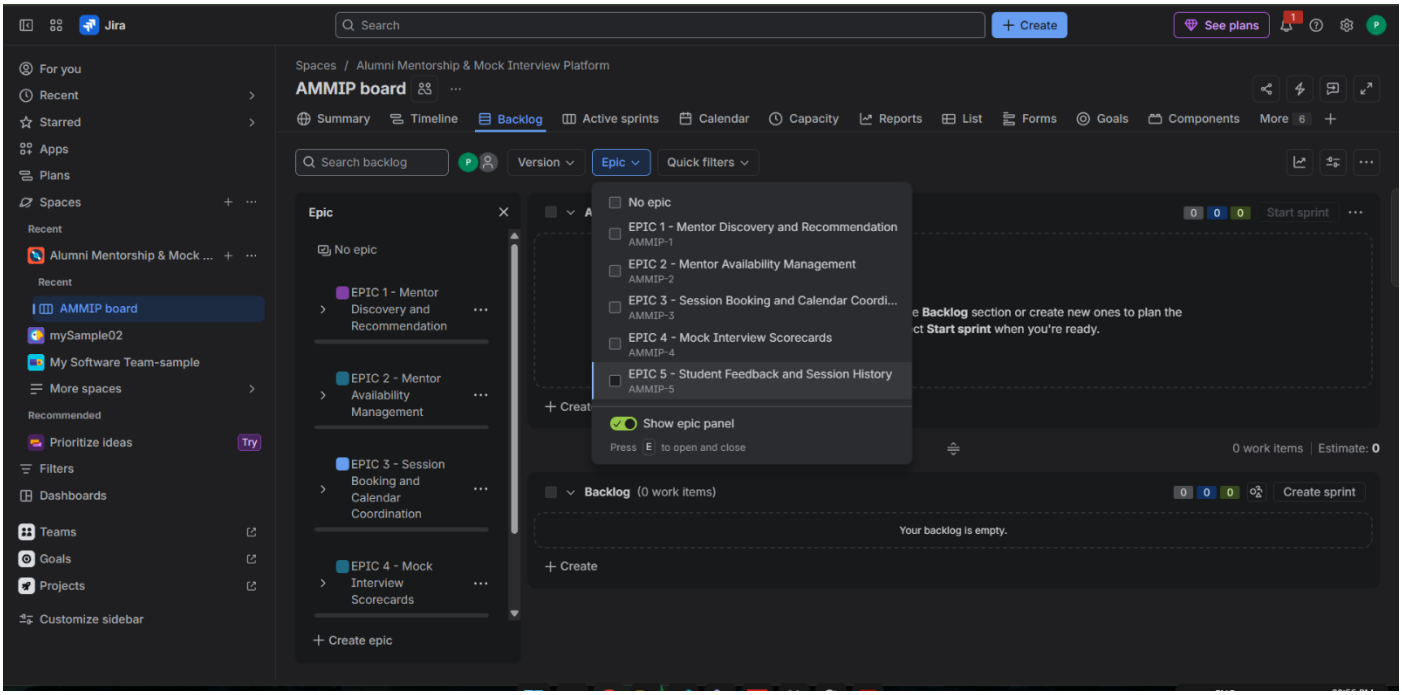

Creating a Space for the Project: Alumni Mentorship & Mock Interview Platform

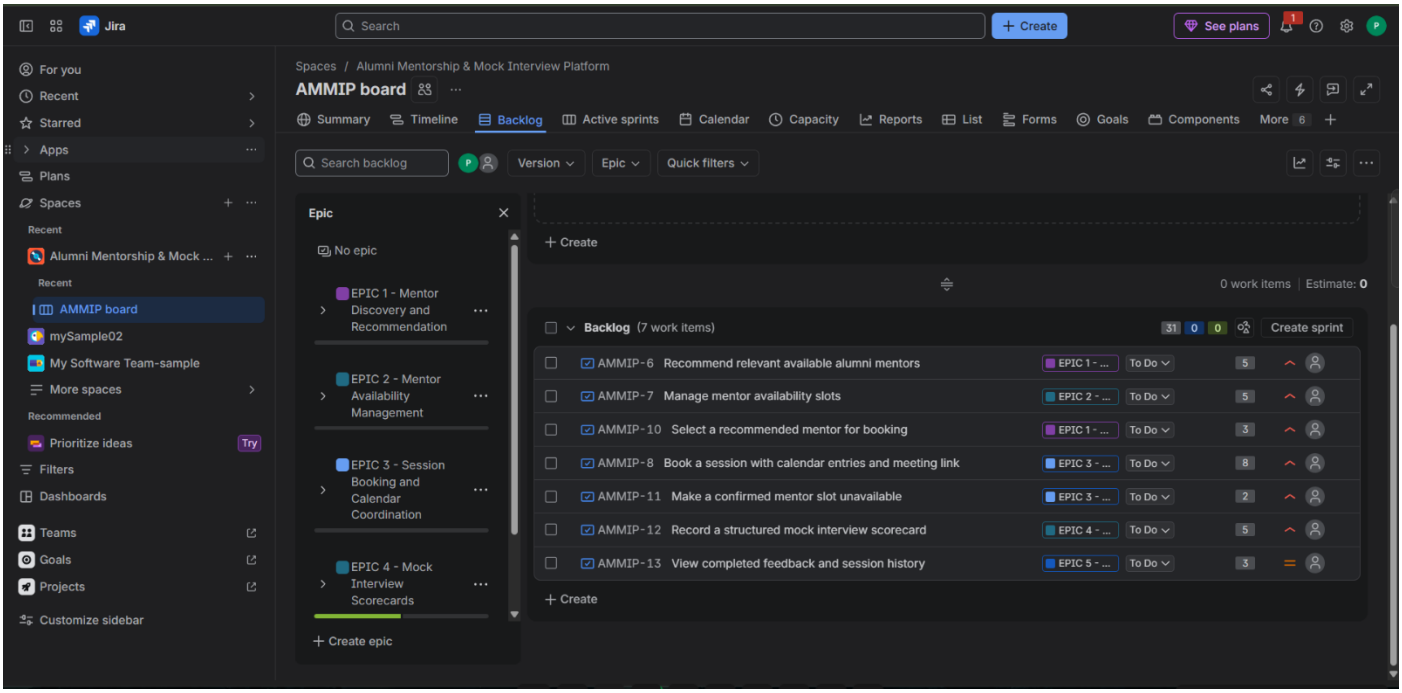

Added all Functional Requirements to Epic Section

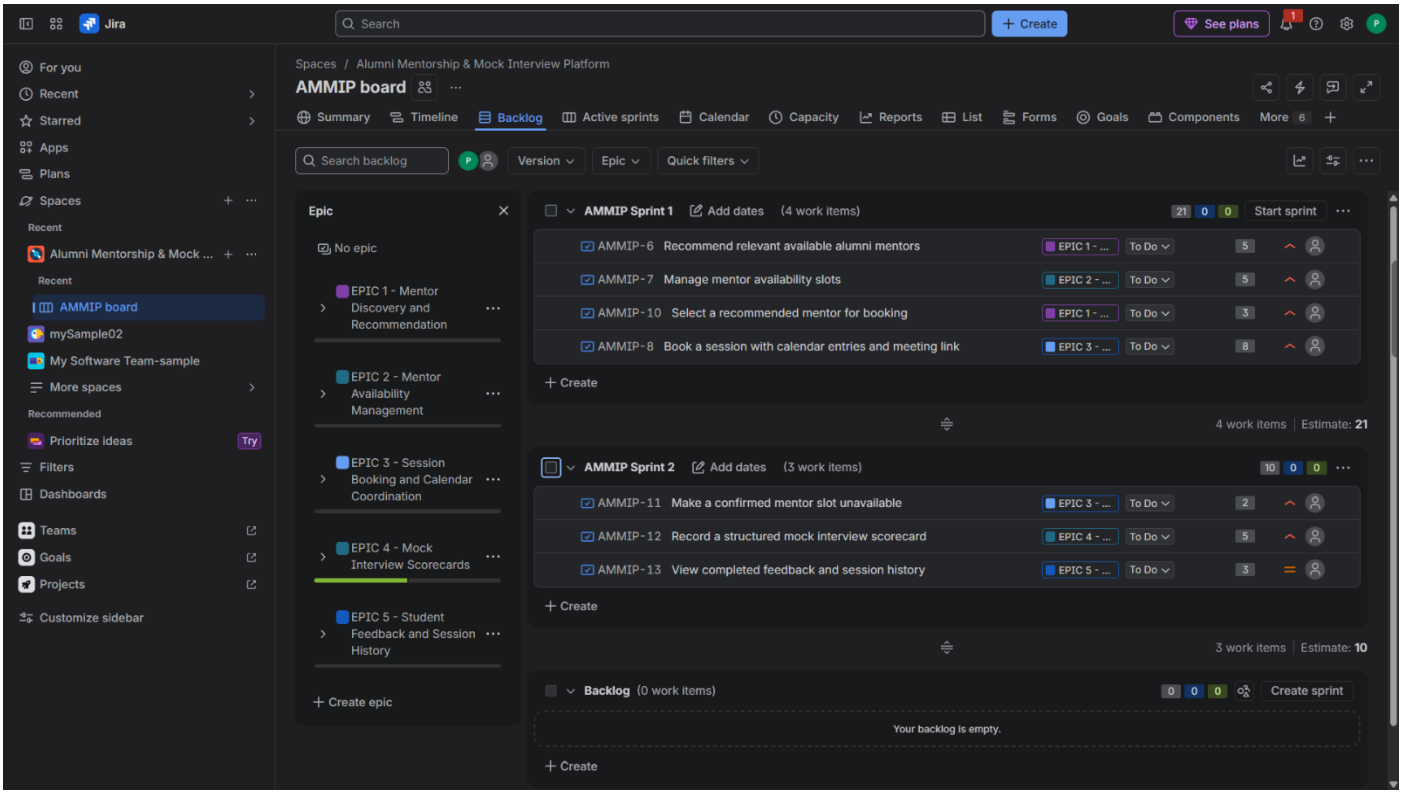

Proof of presence of all requirements in Epic section

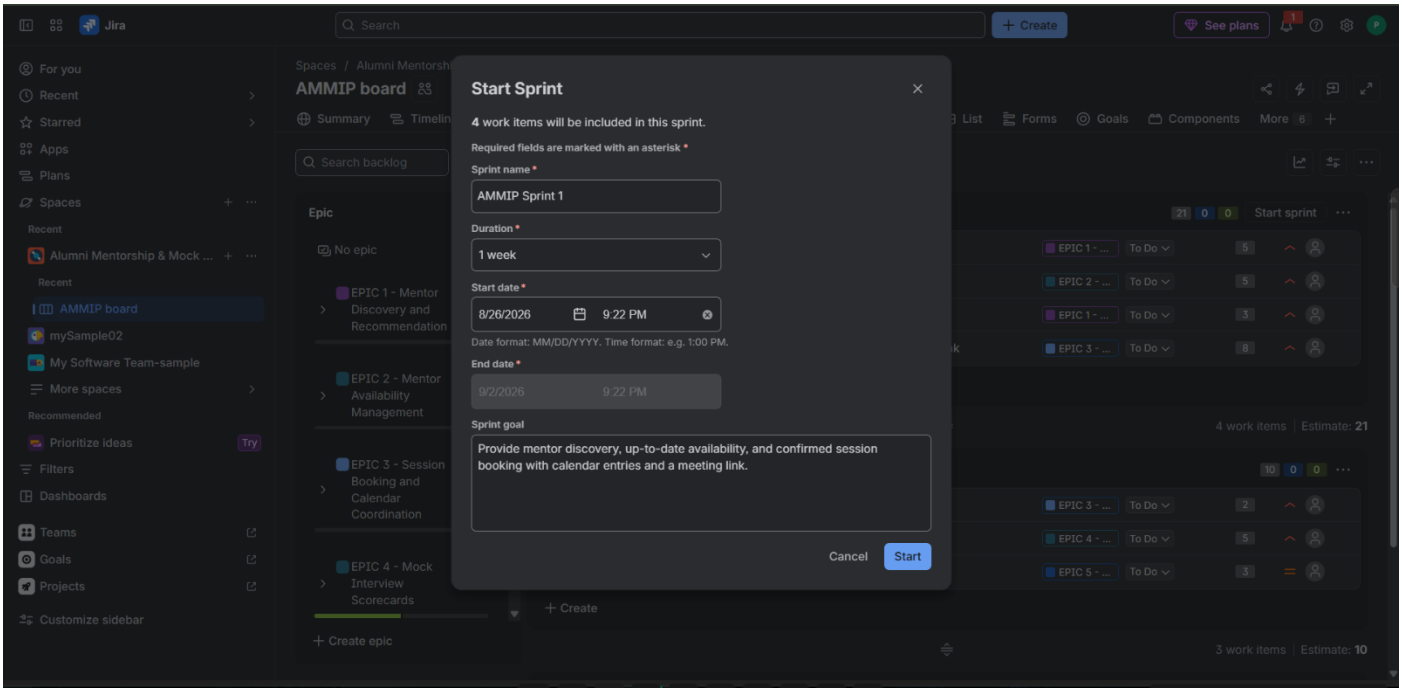

Added Stories to all Epics alongwith Description and Story Points

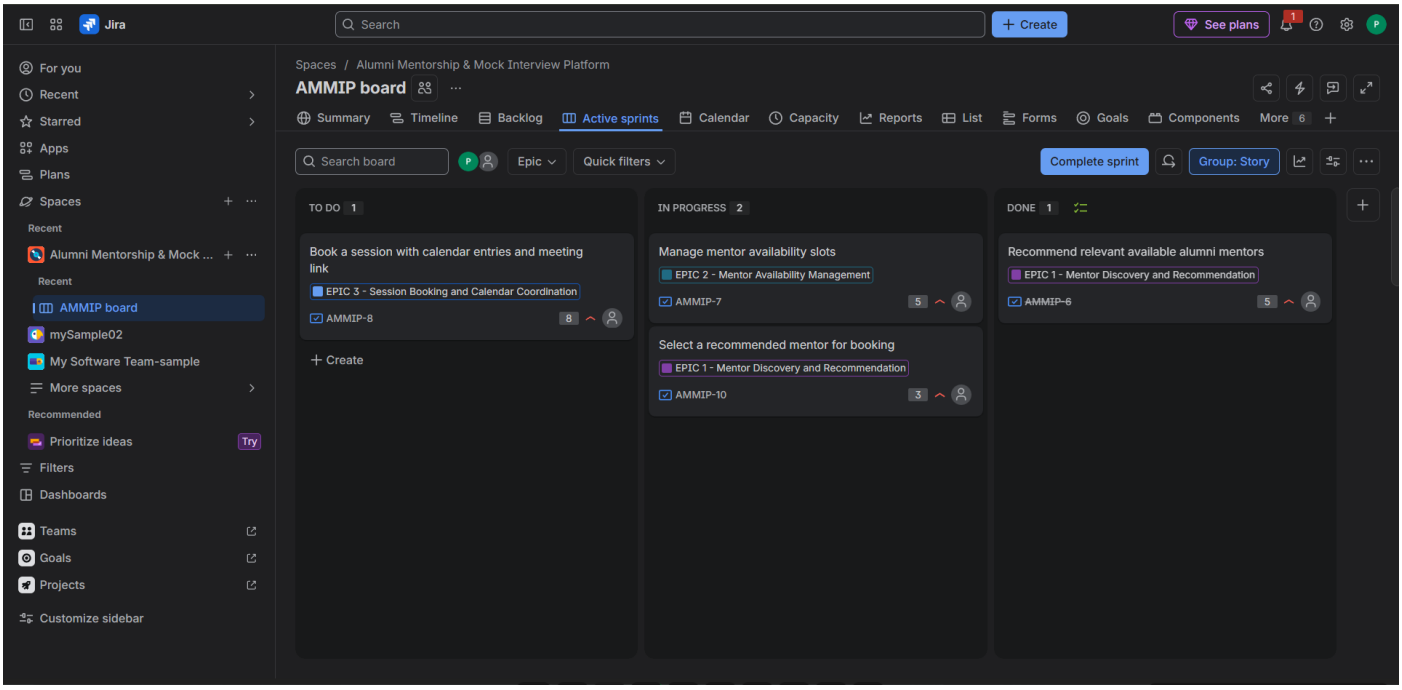

Shifted First 4 stories to Sprint 1 and the remaining to Sprint 2

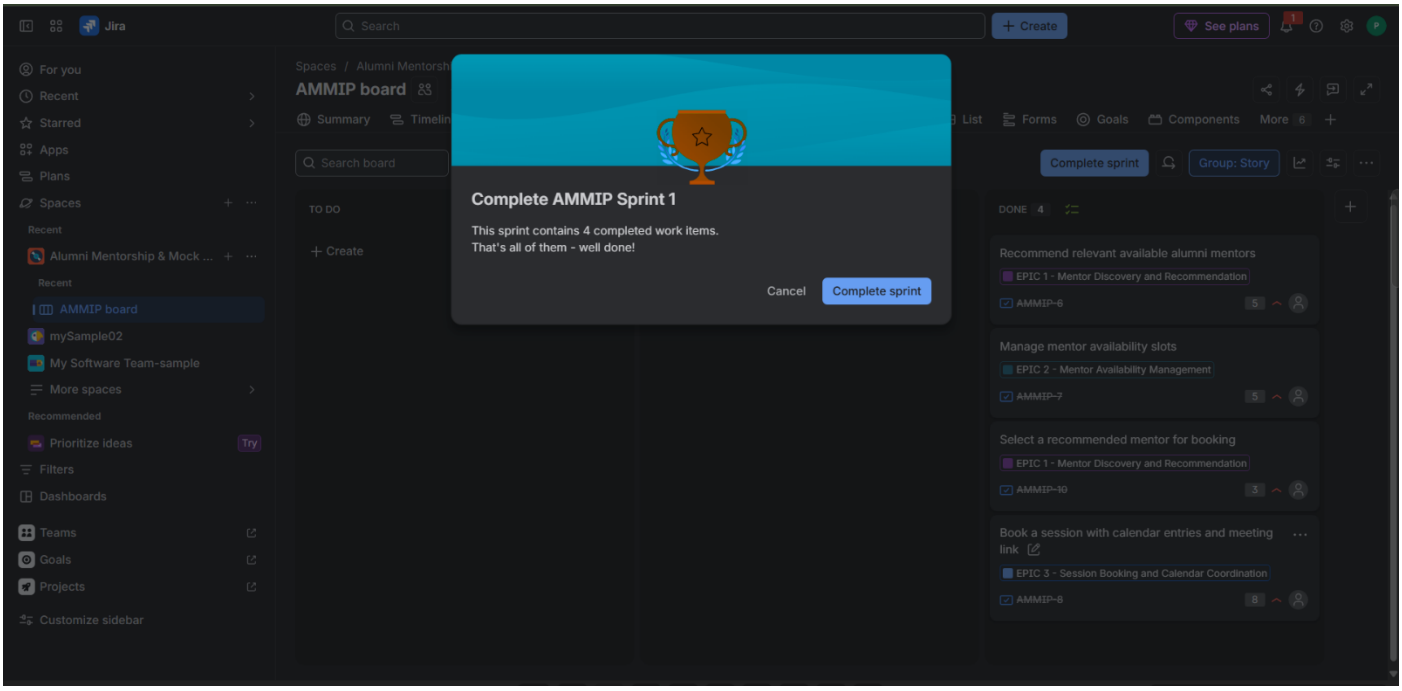

Starting Sprint 1

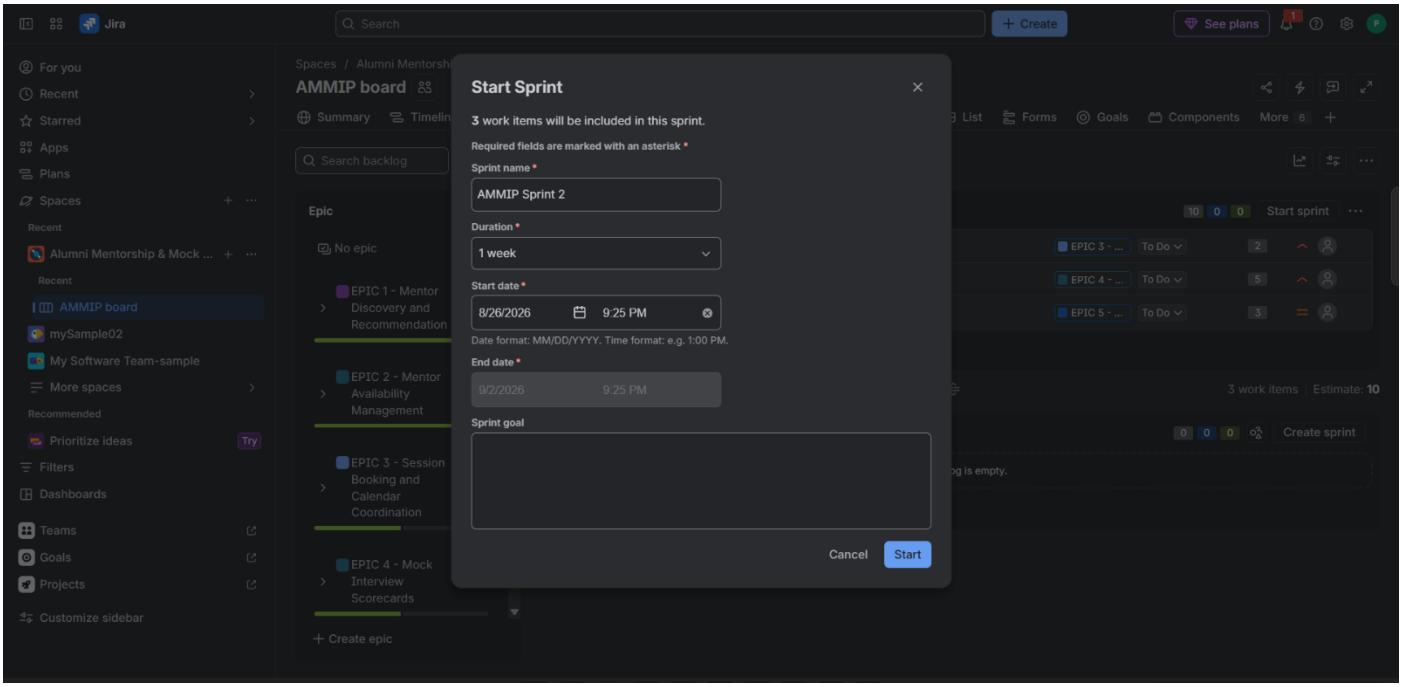

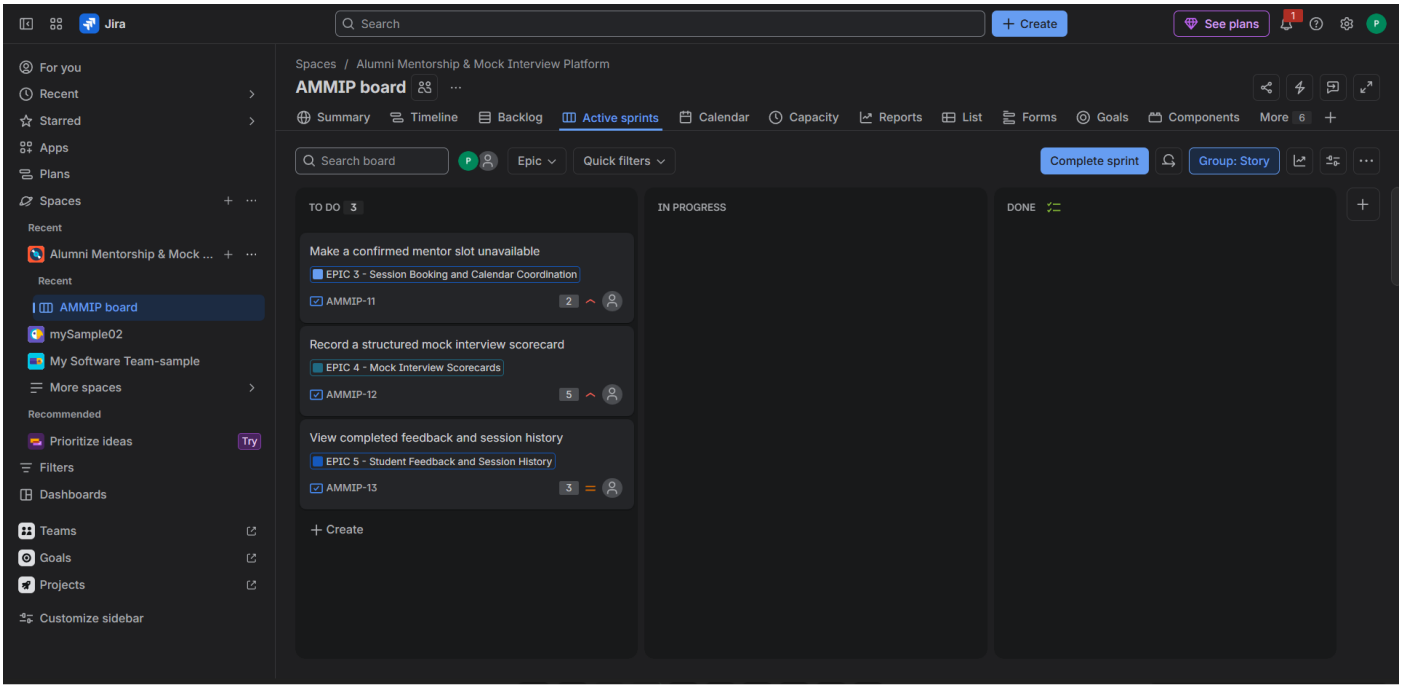

Completing Sprint 1

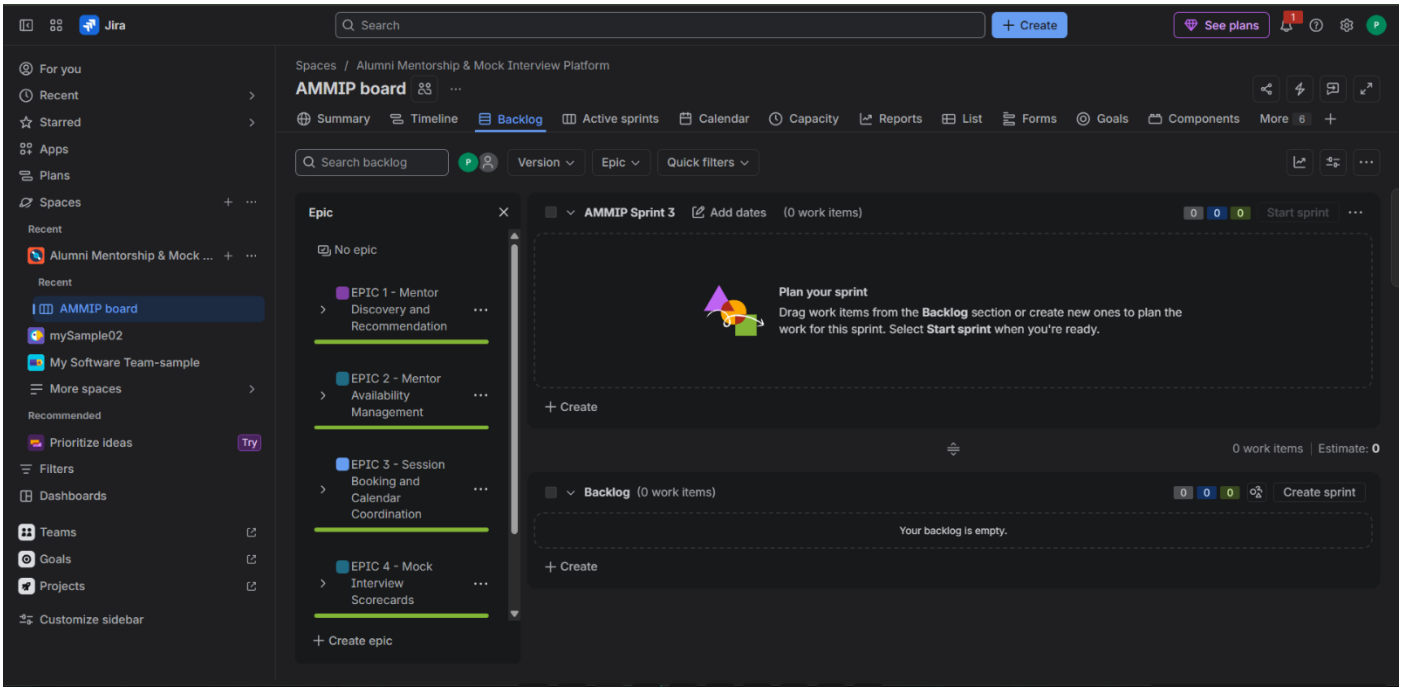

Starting and completing Sprint 2

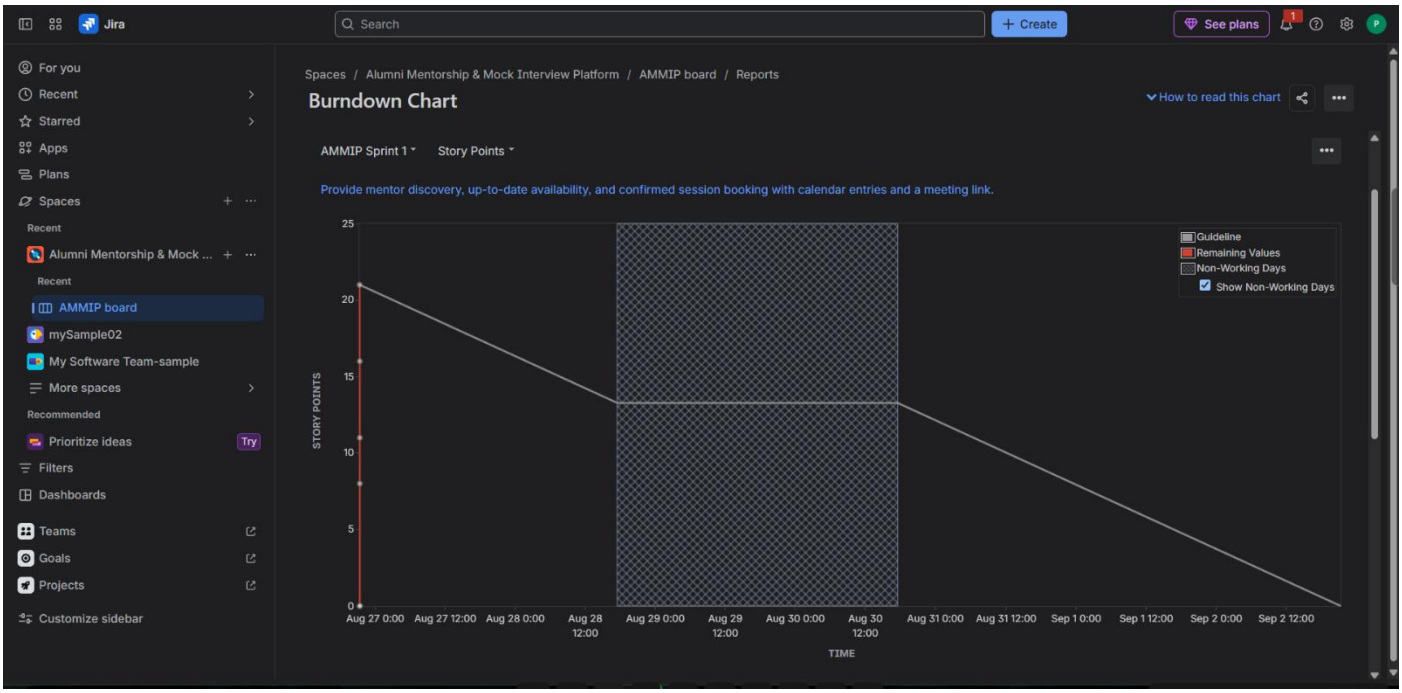

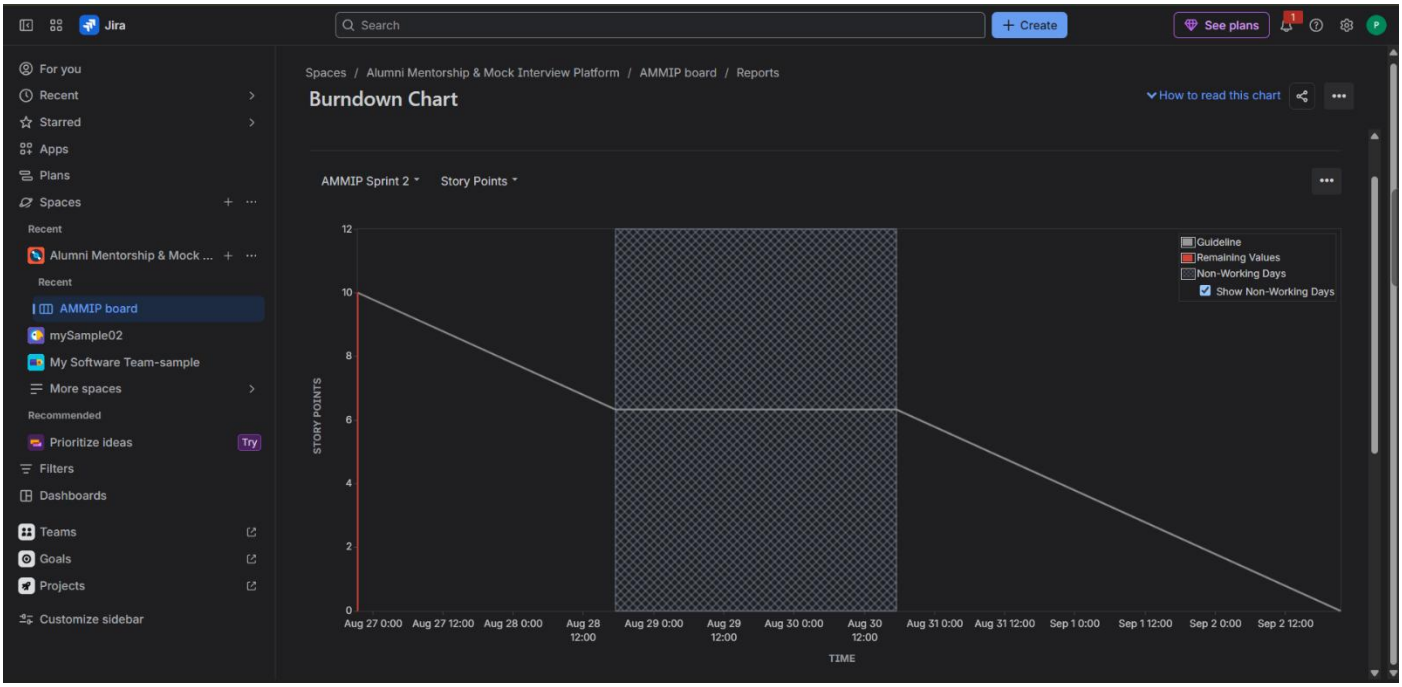

Proof of Sprint completions

Burndown Chart for Sprint 1

Burndown Chart for Sprint 2

REFLECTION QUESTIONS

1. **Did your estimations reflect the actual effort?**
   Yes, the Fibonacci story-point estimates reflected the relative complexity of the stories in the simulated sprint. The session-booking story received the highest estimate because it involves booking confirmation, calendar entries, and a meeting link. Smaller stories, such as making a booked slot unavailable, received fewer points because they have a narrower scope.

2. **Was your backlog well-prioritized?**
   Yes, high-priority stories related to mentor discovery, availability management, booking, and mock-interview scorecards were placed before the Medium-priority story for viewing feedback and session history. This order supports the core user journey: mentors must be available and students must be able to find and book them before feedback history can be viewed.

3. **How did your simulated sprint align with your plan?**
   The simulated sprints followed the planned backlog order. Sprint 1 focused on mentor discovery, availability, mentor selection, and booking. Sprint 2 completed booking protection against double-booking, mock-interview scorecards, and student access to feedback and session history. Stories were moved through To Do, In Progress, and Done before each sprint was completed.

4. **What insights did the burndown chart give about your team's capacity?**
   The burndown chart showed how the remaining story points reduced as stories moved to Done. It helped confirm whether the selected work could be completed within the one-week sprint. A steady downward trend indicates that the planned capacity was reasonable; a flat line would indicate that work was not being completed or that the sprint commitment was too high.
