PART A: REQUIREMENTS TABLE

Functional Requirements

Req ID	Type	Description	Priority	Acceptrance Criteria	Rationale	Comments
FR-001	Functional	The system shall recommend alumni mentors to students based on their selected domain, skills, and mentorship requirements and shall allow the student to book a recommended mentor session.	High	Pass: At least 3 relevant available mentors are displayed for a valid student domain, and selecting an available mentor creates a booking. Fail: No relevant mentor is displayed or the booking is not created.	Core functionality for connecting students with suitable alumni mentors.	Specify the matching factors and ensure unavailable mentors are not offered for booking.
FR-002	Functional	The system shall allow alumni mentors to define and update their available dates and time slots for mentorship and mock interview sessions.	High	Pass: An alumni mentor can add, modify, and remove an availability slot, and the updated slot is immediately reflected in the booking interface. Fail: The booking interface displays an outdated or unavailable slot.	Calendar availability is required to prevent scheduling conflicts.	Must prevent double-booking of an alumni mentor.
FR-003	Functional	The system shall allow a student to book an available mentorship or mock interview session and shall add the confirmed session to the calendars of both participants with a meeting link.	High	Pass: After successful booking, both participants receive the session details, calendar entry, and meeting link, and the selected mentor slot becomes unavailable. Fail: The slot remains bookable or either participant does not receive the session details.	Provides structured and reliable session scheduling.	Scorecard fields should be clearly defined and mandatory fields validated.
FR-004	Functional	The system shall allow an alumni mentor to record a structured scorecard containing ratings and feedback after a mock interview session.	High	Pass: The mentor can submit all mandatory scorecard fields and the completed scorecard is stored against the corresponding student session. Fail: An incomplete scorecard is submitted or the feedback is not associated with the correct session.	Structured feedback allows students to understand their interview performance.	Access should be restricted to the corresponding student.

FR-005	Functional	The system shall allow students to view their completed mock interview scorecards, feedback, and previous mentorship session records.	Medium	Pass: A student can view all completed sessions and the corresponding submitted scorecards and feedback. Fail: A completed scorecard or session record is missing or inaccessible to the student.	Enables students to review feedback and track their mentorship progress	Access control and deletion logging should be tested.

Non-Functional Requirements

Req ID	Type	Description	Priority	Acceptrance Criteria	Rationale	Comments
NFR-001	Non functional-Performance and Security	The system shall protect user profile data and feedback scorecards and shall support soft-deletion of such data within 24 hours of an authorized deletion request.	High	Pass: Authorized deletion requests cause the relevant profile/feedback records to be soft-deleted within 24 hours, and unauthorized users cannot access the deleted data. Fail: Data remains active beyond 24 hours or unauthorized access is possible.	The problem statement explicitly identifies privacy and soft-deletion as requirements.	Access control and deletion logging should be tested.
NFR-002	Non functional-Performance	The system shall return mentor recommendations and available booking slots within 3 seconds for at least 95% of requests under the defined normal operating load.	High	Pass: Performance testing shows at least 95% of recommendation/availability requests complete within 3 seconds. Fail: More than 5% of requests exceed 3 seconds.	Fast responses are necessary for a usable matching and booking experience.	Measure response time under simulated concurrent student requests.

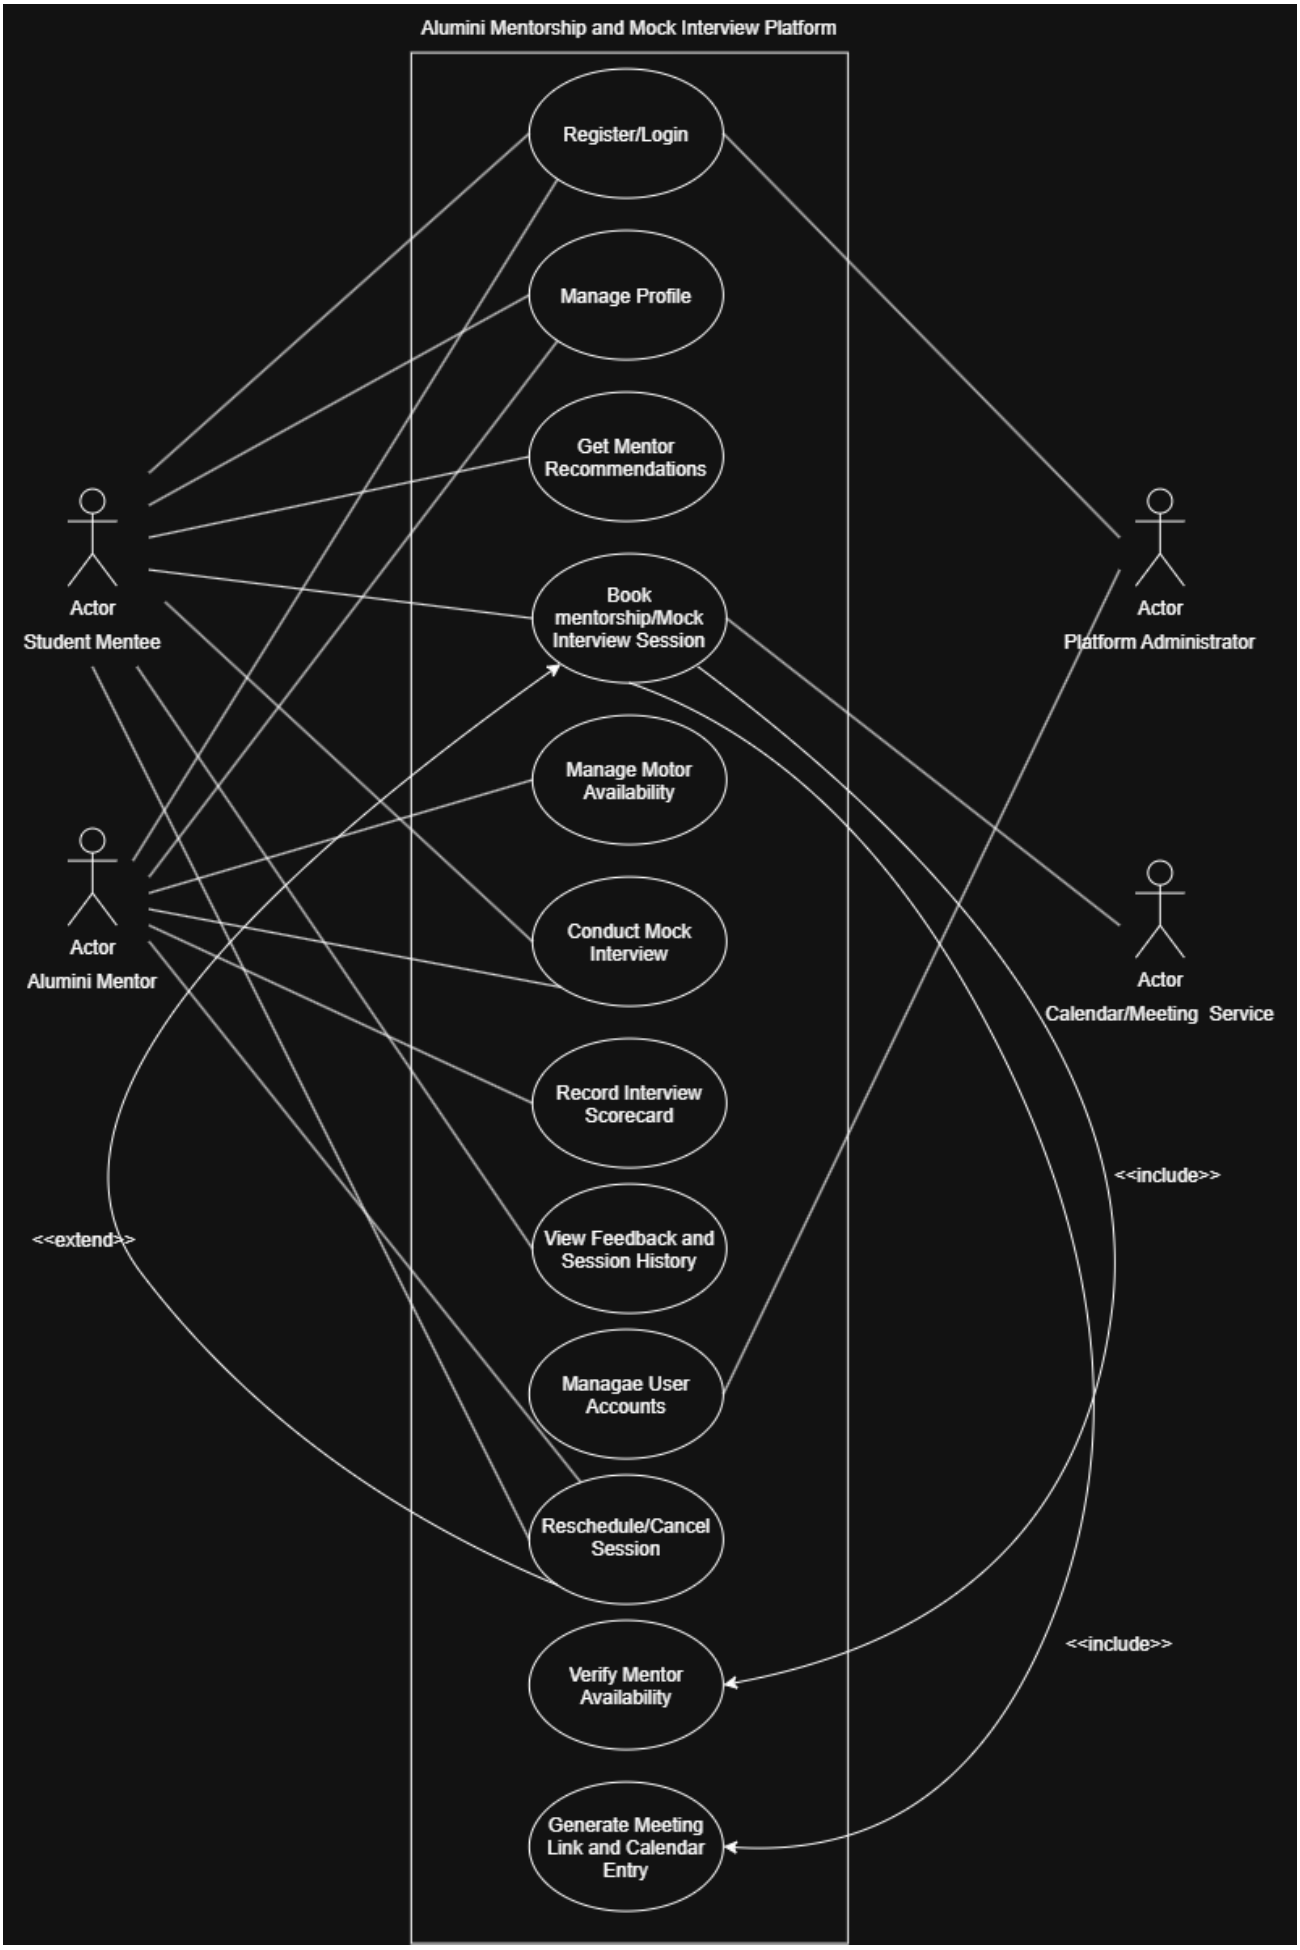

PART B: ACTORS AND USE CASES

Actors

1. Student Mentee
2. Alumini Mentor
3. Platform Administrator
4. Calendar/Meeting Service

Use Cases

1. **Student Mentee**: Register/Login, Manage Profile, Get Mentor Recommendations, Book Mentorship, Book Mock Interviews, View feedback and session history, Reschedule and cancel sessions
2. **Alumini Mentor**: Register/Login, Manage Profile, Manage Availability, Conduct Mock Interview, Record interview scorecard, Reschedule or cancel sessions
3. **Platform Administrator**: Manage User Accounts
4. **Calendar/Meeting Service**: Generate meeting links and calendar entry

Use Case Flow Diagram

PART C: Use-Case Flow Specification

Use Case Name: Book Mentorship / Mock Interview Session
Primary Actor: Student Mentee
Supporting Actors: Alumni Mentor, Calendar/Meeting Service

Preconditions

1. The student is registered on the platform.
2. The student is logged into the platform.
3. The student's domain/profile information is available.
4. The alumni mentor has published available time slots.

Postconditions

Upon successful completion:

1. The mentorship/mock interview session is booked.
2. The selected mentor's time slot is marked unavailable.
3. A meeting link is generated.
4. The session is added to the student's calendar.
5. The session is added to the mentor's calendar.
6. The student receives a booking confirmation.

Main Success Scenario

1. Student logs into the Alumni Mentorship & Mock Interview Platform.
2. Student selects the required domain and session type.
3. The system recommends suitable alumni mentors.
4. Student selects an alumni mentor.
5. The system displays the mentor's available dates and time slots.
6. Student selects an available time slot.
7. The system verifies that the selected time slot is available.
8. The system confirms the booking.
9. The system generates a meeting link.
10. The system creates calendar entries for the student and alumni mentor.
11. The system marks the selected time slot as unavailable.
12. The system displays the booking confirmation.
13. The student and alumni mentor receive the session details.
14. The use case ends successfully.

Alternate Flow: Selected Slot No Longer Available

The system determines that the selected time slot is no longer available.

1. The system informs the student that the selected slot has already been booked.
2. The system displays the mentor's currently available alternative slots.
3. The student selects another available slot.
4. The system verifies the newly selected slot.
5. If the slot is available, the system continues from Step 8 of the Main Success Scenario.
6. If the student does not select another slot, the booking process is cancelled and no session is created.
